PROFILE

Senior Software Engineer with more than 10 years of experience building and improving products across medical software, ecommerce, and scheduling. Deep frontend expertise with full stack capability across product development, architecture, continuous integration, developer experience, automation, tooling, and maintenance. I value strong teams, clear systems, and technology that improves products and engineering workflows. I use AI tooling to implement clearly defined intent while retaining ownership of architecture and engineering decisions.

EXPERIENCE

Senior Software Engineer

CURRENT ROLE

Rivian

Frontend Tech Lead

TX Services / Doodle AG

- Led frontend engineering in a cross functional Product Growth team, contributing to conversion improvements and growth from CHF 1 million to CHF 10 million ARR.
- Managed more than 100 A/B experiments across their full lifecycle on a platform used by more than 30 million people.
- Advocated for and helped deliver migrations to TypeScript, Next.js, and an Nx monorepo through technical talks, consultation, and implementation.
- Built subscription products and complex end to end features, and supported platform incidents, tracking, analytics, and engineering interviews.

Frontend Developer

Commerce Connector GmbH

- Built consumer widgets and an enterprise administration platform for SaaS ecommerce products.
- Delivered custom widget work that supported contracts worth about EUR 2 million with global brands.
- Maintained a reusable vanilla JavaScript widget and delivered reporting across AWS integrations and frontend administration tools.

Software Developer

Comtrade Group

- Developed a cardiac care platform used by hospitals in Europe and the United States for monitoring, reporting, and early detection of cardiac risks.
- Built two mobile applications and supported encrypted real time communication between doctors and patients.
- Used TDD and documentation for regulated medical software, and helped establish automated cross browser testing.

SKILLS

Product: End to end development, architecture, developer experience, automation, accessibility, experimentation

Backend and cloud: Node.js, REST APIs, AWS, Docker, Kubernetes

Communication: WebRTC, encrypted real time systems

Frontend: JavaScript, TypeScript, React, Next.js, Angular, Ionic, design systems, Contentful

Quality and delivery: GitHub Actions, Jenkins, Playwright, WebDriverIO, Jest, TDD, monorepos

AI tooling: Claude Code, Devin, Cursor, cloud agents

EDUCATION

Bachelor of Applied Science in Informatics
